

## Non-profit organisations Authorities

Better planning, management and control

### Budget control and efficiency? Just slogans?

Contracting authorities, local councils and even non-profit organisations are constantly being accused of not using tax revenues or donations responsibly enough.

### Can you guarantee the safety of your employees?

Demonstrations, unclear situation, outraged relatives, the threat of escalation. Where are the helpers and emergency services? Are people in danger?

### How do you secure yourself against liability risks?

Green areas and parks are regularly maintained, also in order to prevent accidents caused by visibility restrictions to roads and pavements. The duty to scatter grit and clear snow in winter can also lead to legal disputes and the payment of compensation for damages. If the jumbo jet skidded off the runway or the passer-by broke his leg, was that due to the deployment of too few snow ploughs or the use of too little grit, or snow clearance at the wrong time?

### Do you adhere to quality standards?

A few seconds make all the difference when people are in need. For example, according to the Alarm and Deployment Ordinance (Germany), the fire brigade is required to be at the scene of the incident in 8 minutes. Can you prove with legally safety that this standard has been adhered to?

### This is what the ENAIKOOON telematics solutions offer:

#### Better planning, maintenance and monitoring

- Optimisation of operation planning and the precise transmission of operational orders, e.g. to the police, fire brigade, technical relief agency
- Monitoring of the transport of patients
- Monitoring and documentation of the transport and securing the timely delivery of donor organs, blood, vaccines, medicines
- Coordination of the winter road services and accurate billing for grit

#### Increased security and control

- Avoidance of theft through immediate event reporting
- Recovery of stolen goods (e.g. donations, equipment and even tree trunks in the forest) with continuous, real-time tracking
- Immediate detection of theft and vandalism of parking ticket and other vending machines

#### Personal safety

for emergency services, senior citizens, children, people with dementia, people with disabilities

- Real-time localisation
- Emergency call function
- Still-alive function / dead man's switch

#### Forgery-proof activity verification

- Complete protocol of inspections performed, checking trips, cleaning and repairs of roads and pavements
- Proof of the actual performance of contractual services (e.g. transport of patients)
- Proof of timely arrival in emergency situations

**ENAIKOOON records, checks and documents everything to do with your mobile objects.**

## Geofence: small cost, big impact

### Application: Brandenburg State Police

#### Operating resource localisation - operation management of the future

The Brandenburg police force in Germany has several hundred telematics units in operation. Thanks to the strategic use of the ENAIK00N technology, the nearest operational unit to the scene of the incident can be deployed according to the principle of the shortest intervention times, even in adjacent areas of responsibility.

#### Strategic objectives and predicted effects:

- Increased regional coverage through optimised management in the control centres
- Shortening of the response and latency times in the control centres
- Reduction of resource deployments
- Increase in the safety of the forces through continuous location knowledge and the corresponding guarantee of precise guidance of rescue or support forces

#### Theft of parking meters

„In our field it is vital to react to risks of theft immediately. In real terms, that means driving to the right parking meter in case of alarm. We can achieve this with ENAIK00N's technical solution. The theft rate has fallen markedly since then. The word has got around that our people are on site

within a short time. As a result, our client saves a lot of money on the purchase of new equipment. The investment has paid off in a very short space of time.“

Herbert Meys, Managing Director of  
MEYS-Electronic Security Systems GmbH.  
Aachen, Germany

## An overview of ENAIK00N Telematics

- Very large selection of different telematics modules: suitable solutions for almost any application area
- Mobile telephone transmissions in real time: you always know what's going on
- Powerful, highly secure Internet-based solution:
  - no software installation required
  - data retrieval via any web browser - even with a mobile phone
  - possibility to interface with existing programs (e.g. control centre software)
- Automatic email reports, SMS for easy handling
- Evaluations put you in the know: Logbook, daily and weekly reports for individual drivers or machines, break times, speed profiles

## Easy to use technology

- Installation of the device in minutes
- Maintenance-free operation
- Detailed manual and hotline with usual call charges

## Useful extras

### ENAIK00N driver-id

An inexpensive personal identification system

- Time recording and billing for mobile workers
- Allocation control: who provided what performance with which vehicle?

### ENAIK00N rfid-tracker

- Indoor tracking using RFID
- Route control of area drivers

### ENAIK00N buddy-tracker

You're on the road and want to keep an eye on things?

We have the right software for BlackBerry® and Windows® Mobile phones.
