

ENAIKOON time-29 Version 2.6

**Recording of attendance times
of mobile workers and subcontractors**

Your business employs people that work at constantly changing places, far away from the offices and production facilities?

Then you definitely know this topic: it is difficult to know if people actually meet all the agreed work and rest periods.

There's an end: With ENAIKOON time-29, any start of work, any interruption and end of each work can be registered at any place in the world and can be forwarded thru GPRS nearly in real time to the head office, to the construction area supervisor or to the employer.

All you need is ENAIKOON time-29 on-site, a SIM card with GPRS data plan and an internet enabled PC, with which you can retrieve the data. The device allows 220 V or 8 V bis 31 V DC power supply.

A web based software shows you the data of the mobile workers registered with ENAIKOON time-29 and allows evaluation of the data as well as forwarding the data to your payroll accounting software.
