

Container service

Complete management over containers, waste presses, and your entire fleet

Container monitoring - saves time and reduces costs

We make sure your containers do not look like this.

With ENAIKOON's telematics modules, you can see where your containers are, their condition, and who transported them to their current location. You can also optimise transport routes and maintenance management. ENAIKOON's telematics modules will send all relevant data to a server in almost real time. All you need to do to retrieve the data is go online and log in to the web portal.

ENAIKOON telematics solution features

- logistical management of container vehicles
- management of container groups
- management of various locations and customer groups

Determining hours of operation

- simple collection of hours of operation for:
 - drives and motors
 - hydraulic units
 - temperatures
- real-time monitoring of maintenance intervals

Status messages for

- status "full"
- malfunction
- maintenance
- transport

Anti-theft system

- area monitoring with a geofence
- G-force sensor to indicate unauthorised transport
- alarm to indicate unauthorised use
- remote shut-down in the event of misuse

Employee monitoring

- detailed evidence of which employee drove which container where
- analysis of driving behavior
- access control: only authorised staff can use the vehicles
- work report for mobile staff
- evaluation of vehicle log
- repair times per container

Patented location module revolutionizes container service

Installation of a telematics unit in containers and waste presses can often be costly and difficult. The size of the units usually leave little room for additional technology and hardware installations tend to not only be complicated, but also leaves the new unit exposed.

The new telematic device, ENAIKOON locate-60/61, elegantly solves this problem.

The exact GPS-position, the hours of operation and other vital data of the machine are available immediately, through information sent from the device. In addition, the telematics device is easily concealed inside your current plug.

The self-contained telematic module for use in harsh environments

Containers without their own power supply need technology that works independently, for an extended period of time. The technology used must be durable and self sufficient and still send position reports.

With the telematic unit ENAIKOON locate-15, these problems are solved.

The tracking module ENAIKOON locate-15 has extremely long lasting batteries that allow for up to 10 years of operation sending one position report per day. If several position reports are needed per day than the operating life is accordingly reduced. The encapsulated potted version is also available for the toughest jobs.

ENAIKOON's telematics overview

- offering a large selection of different telematics modules, creating customised solutions for almost any possible application
- wireless communication in real-time so you always know what's going on
- powerful and secure web-based solution with:
 - no software installation required
 - data retrieval via any web browser or on your mobile phone
- automatic e-mail and text message reports for ease-of-use
- evaluations put you in the know: driver log-book, daily and weekly reports about individual drivers or equipment, break times, and speed profiles

Easy-to-use technology

- installation of the device within minutes
- maintenance-free operation with detailed manual
- hotline with local call charges

Useful add-ons

ENAIKOON driver-id

An inexpensive personal identification system, that can be used for myriad task including, but not limited to, attendance and allocation control.

- time recording and billing for mobile workers
- allocation control: identify who provided what service and with which vehicle

Mobile phone software inViu routes

If you re regularly on the road and want to keep an eye on things, we have the right software for Android, BlackBerry® and Windows® Mobile 6.5 phones.

ENAIKOON NFC-tracker

- allows tamper-proof data to be captured seamlessly for:
 - working times
 - activity reports
 - container inventory and movements
- equipping places of use and the container with NFC chip
- mobile service staff equipped with NFC-capable mobile phone, and software inViu NFC-tracker
