

Hotel Management

Track hotel workers and their tasks to run a flawless hotel operation

Do you know where all of your employees are and what tasks they're working on?

Having multiple workers in different departments make it harder to keep track of their activities.

How much time is being wasted with paper logs and manual record keeping?

Each time employees stop to keep manual records is time that could have been used to work on a task.

Is your current housekeeping system accurate?

Paper logs and manual record keeping can create errors that can cause customer dissatisfaction.

How precise are your employee timesheets and are they integrated into your accounting system?

Inaccurate working hours can create problems in scheduling and payroll.

Can you ensure the safety of your guests and employees?

Every hotel is different in size, but they all share the risk of welcoming unknown visitors. This affects not only your guests' security but employees' work safety as well.

ENAIKOON telematics solution features

Employee task and location monitoring

- view workers' whereabouts and what specific task they are working on in real time, all from the comfort of your office
- knowing employees' location can increase their safety in cases of emergency
- accurately records employee working hours

Remote employee and task management

- create new tasks easily, saving time on delegation and training

Guard tour management system

- improved hotel security means better safety for staff and hotel guests

Digitised reports

- save money on paper and employees' time on manual record keeping
