

Dispatch messenger service

Securely send written messages and monitor vehicle arrival times live in inViu pro

Clear communication

Are you tired of hearing the same story from frustrated dispatchers trying to contact one of your drivers, a number of times to communicate a change to an order, only to find, that the driver is unreachable? Perhaps the dispatcher calls the wrong person causing delays in communication?

This is a common and unfortunate issue in many companies. The unreachable driver may be on the road in an area with no reception or may have no mobile. These incidences cause the dispatcher to spend unnecessary time on driver communication, rather than time focusing on customers and scheduling.

Phone calls are generally more time-consuming than written communication and are considerably more expensive. With text messages (SMS), its delivery is never assured. What can you tell the customer who calls wanting to know the exact time of delivery?

Imagine if your dispatcher could take one quick look online and see the navigation system's estimated arrival time and the remaining route for each driver. This is what the inViu pro can offer you.

ENAIKOON's dispatch messenger features

Optimal driving order management

- orders and destinations are sent from the dispatcher to the navigation display in the vehicle
- drivers can accept or reject an order with one click
- drivers can send written messages to the dispatch software
- complete routes sent to vehicles
- selection of destinations in the navigation system's order list

Clear, written communication

- all driving orders, messages, and message status updates can be viewed and verified in inViu pro
- written communication can prevent oral misunderstandings, like trips to the wrong customer or going to the wrong address
- no more tedious typing of destinations using the navigation system keypad; one click on the order address is all that is required

Faster overview of all information

- faster overview of all orders and messages
- instant overview of locations and arrival times

Save time and money

- Fewer expensive phone calls – particularly when abroad, fewer unverifiable, expensive text messages
- accurate and quick responses to customer enquiries
- vehicle communication is saved during poor mobile transmission and sent immediately, as soon as the signal is strong enough – no unnecessary call-backs

Safety in road traffic

- all phone conversations via hands-free hardware, so that the driver can concentrate on the road ahead

Where can Garmin® telematics be applied?

Dispatch support is particularly important for forwarding agencies, transport companies, police departments, fire departments, emergency services, courier services, taxis, service fleets, and many more.
