

ENAIKOON temp-checker

Complete surveillance of temperatures in atmosphere-controlled vehicles, containers, and machinery

ENAIKOON temp-checker is a software plugin that is integrated into inViu pro.

This plugin allows you to monitor the temperatures of atmosphere-controlled vehicles and equipment, such as refrigerated trucks and machinery.

There are two major uses for the ENAIKOON temp-checker plugin: cold chain management and equipment monitoring of temperature-sensitive machinery. It is extremely important in both cases to control and maintain the required temperatures. A great feature of the plugin is that it sends out alerts via e-mail or text message (SMS) so that managers are immediately notified of temperature changes. Real-time notifications, quality devices, and reliable data are what make this solution indispensable for any company seeking better risk management.

This plugin works in conjunction with the ENAIKOON locate-06 GPS tracking device, the temp-sensor attachment, and the powerful online telematics software, inViu pro.

Which industries can benefit from the ENAIKOON temp-checker?

Food & Beverage

- delivery of perishable foods and beverages in refrigerated trucks

Flowers & Botany

- delivery of flowers and plants

Medical

- transport of vital organs and medicine

Transport & Logistics

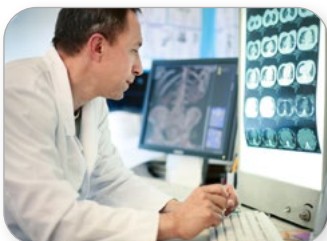

- national, cross-border, and overseas logistics using refrigerated trucks and containers

Construction

- monitoring of temperature-sensitive machinery and equipment

Plumbing

- monitoring of temperatures in remote areas

Temperature monitoring

- define threshold values for desired temperatures
- view temperature data of all monitored assets on inViu pro online
- set alerts for real-time e-mail or text message (SMS) notifications of surpassed threshold values
- export data into meaningful reports

Required hardware

- GPS device: ENAIKOON locate-06

- attachment: ENAIKOON temp-sensor

The temp-sensor attaches to the ENAIKOON locate-06 and can measure temperatures from -55°C to +125 °C (-67 °F to 257 °F) to an accuracy of 0.5°C (0.9 °F). Up to 16 temperature sensors can be simultaneously attached to an ENAIKOON locate-06 remote monitoring device without affecting its output.
