

ENAIKOON time-29

Attendance recording device for mobile workers and subcontractors

This device was designed specifically for optimised attendance accountability for workers and subcontractors, who work at multiple locations and far away from the main office and production facilities.

For fiscal accountability and providing the best customer service and scheduling, it is important for you to know if your employees are actually meeting all of the agreed work and break periods.

The solution is the **ENAIKOON time-29**, as it records and monitors any change to the shift times and work interruptions anywhere in the world with a cellular network. This information can then be forwarded through GPRS in real-time, to either the home office, the construction supervisor, or the employer.

All that is needed is ENAIKOON time-29 on-site, a SIM card with a GPRS data plan, and a PC with internet access in order to retrieve the data. The device allows 220 V or 8 V to 31 V DC power supply.

The web-based software that goes with the ENAIKOON time-29 consists of inViu pro and the plugin ENAIKOON staff-tracker. This shows you the data of the mobile workers registered with ENAIKOON time-29 and allows the evaluation of data, as well as forwarding the data to your payroll accounting software.
