

ENAIKOON v-locator-mobile version 2.1

GPS tracking, dispatching, and fleet management with commercially available mobile phones

Highlights of ENAIKOON v-locator-mobile

- worldwide precise GPS positioning of Windows® Mobile 6.5 Smartphones
- driving jobs are sent from the dispatching centre to the mobile phone
- status messages are sent from the mobile phone to the dispatching centre

ENAIKOON v-locator-mobile globally locates any mobile phone with GPS precision. This enables you to know where your mobile workers and vehicles are at all times, without the need to install a telematics device in each vehicle.

How it works

The software developed by ENAIKOON forwards the information of the GPS receiver, built into the mobile phone, through GPRS (the low cost internet connection for mobile phones) to an on-line server.

With inViu pro, the web-based telematics software, you can view the data of your mobile phones, at any time with any PC or mobile phone with internet connection.

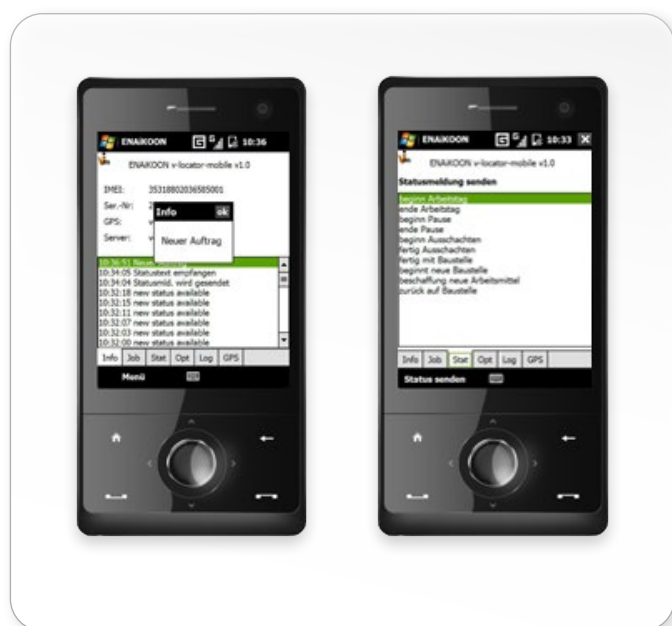

ENAIKOON v-locator-mobile in conjunction with inViu pro provides a variety of functions and reports:

- alarm activates, as soon as a mobile phone arrives at or leaves a predefined geographical area
- sending of driving jobs and status messages (pause, busy, accident, etc.)
- assignment of the mobile workers' tasks to cost centres (service personnel, staff away on a construction job, etc.)
- current location of all mobile phones
- driving routes, speed, and route details
- driving hours, break times, down-times, and work times
- weekly and monthly reports

Compatible with most commercially available mobile phones with GPS and a Windows® Mobile 6.5 operating system.

What this means for you

Minimal requirements for the mobile phone allows you to simultaneously use many of the third-party software written for Windows® Mobile 6.5 smartphones. Do not hesitate to contact us to help evaluate, whether your preferred mobile phone is compatible with the current version of ENAIKOON v-locator-mobile.

Easy integration with existing backend software

It has become a popular and profitable trend for many companies to integrate tailor-made telematics technology software into their core business processes.

ENAIKOON v-locator-mobile has been designed to integrate into existing business software as easily as possible.

The position of the mobile phones and the routes are clearly displayed on the integrated online map, based of the open source project OpenStreetMap®.
